

Don Bosco Institute of Technology, Kurla(W)
Department of Electronics and Tele-Communication Engineering
ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

Lab Number:	3
Student Name:	Rohit Gupta
Roll No :	30

Title:

3.1 Write a C++ program for Basic bank Management System

3.2 Write a C++ program to Create a class Student with two method getData() and printData(). getData() to get the value from the user and display the data in printData(). Create the two objects s1 ,s2 to declare and access the values from class StudentTest.

Learning Objective:

- Students will be able to write C++ program for using classes and objects.

Learning Outcome:

- Ability to execute a simple C++ program by accepting and displaying values using functions
- Understanding the classes and objects concept in C++.

Course Outcome:

ECL304.1	Understand object-oriented programming concepts and implement using C++
-----------------	---

Theory:

1. Difference between procedural and object oriented language:

Procedural programming uses a list of instructions to tell the computer what to do step-by-step. Procedural programming relies on - you guessed it - procedures, also known as routines or subroutines. A procedure contains a series of computational steps to be carried out. Procedural programming is also referred to as imperative programming. Procedural programming languages are also known as top-down languages.

Object-oriented programming, or **OOP**, is an approach to problem-solving where all computations are carried out using objects. An **object** is a component of a program that knows how to perform certain actions and how to interact with other elements of the program. Objects are the basic units of object-oriented programming.

Faculty: Ms. Deepali Kayande

Don Bosco Institute of Technology, Kurla(W)

ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

2. Application of object orientation:

- User interface design such as windows, menu.
- Real Time Systems
- Simulation and Modeling
- Object oriented databases
- AI and Expert System
- Neural Networks and parallel programming
- Decision support and office automation systems etc.

3. Brief introduction to C++:

C++ (pronounced "see plus plus") is a programming language began as an expanded version of C. The C++ were first invented by Bjarne Stroustrup in 1979 at Bell Laboratories in Murray Hill, New Jersey. Bjarne Stroustrup initially called the new language "C with Classes." However, in 1983 the name was changed to C++. C++ is a middle-level programming language. C++ is a statically typed, compiled, general purpose, case -sensitive, free-form programming language that supports procedural, object-oriented, and generic programming.

Algorithm 1:	<ol style="list-style-type: none">1. Start2. Define Class BankLab 23. Define attributes – Name , account_type , account_number, amount, balance4. Declare attributes by using constructor of class.5. Define and declare method – deposit() to deposit the amount6. Define and declare method – withdraw() to withdraw the amount7. Define and declare method – display() to display the account details8. Define Main function()9. Create object b1, b2, b3 to call the class functionality.10. Do – while loop to repeat the process.

Output Screenshot 2:

```
Enter the name of the student:
Rohit
Enter the roll-no of the student:
30
Enter the Division of the student:
B
Enter the cgpa of the student:
9.1
Enter your branch:
EXTC
Name of the student: Rohit
Roll-no of the student: 30
Division of the student: B
The cgpa obtained by the student: 9.1
Branch of the student: EXTC
